This antibody specifically binds to human cycle and the control of the control of the cycle associated antigen-4 (CTLA-4). Such antibodies cycle are used in methods for inducing, augmenting or prolonging an immune cycle are used in methods for inducing, augmenting or prolonging an immune cycle and the cycle and cycle are used or cycle as ou useful for treating autoimmune disease in a subject caused or cycle and cycle are used to cycle and cycle are used to cycle and cycle are used to cycle and cycle are used for treating cancer, melanoma or epithelial cancer. A polyvalent or polycional cycle antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases with inflammatory or allergic components. The polyvalent or polycional preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lugus crythematosus, multiple sclerosis, insulin-dependent

A polyvalent or polycional antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia cravis and lumine arthreams that are treatment of diseases such as rheumatoid arthritis, myasthenia

A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia gravis and lupus erythematosus, multiple sclerosis, insulin-dependent diabetes mellitus, transplant rejection, and inflammation, graft versus

Sequence

```
The present sequence represents the heavy chain variable region of C human antibody 10DL. This antibody specifically binds to human CY typotoxic T lymphotyte associated antigen-4 (CTLA-4). Such antibodies are used in methods for inducing, augmenting or prolonging an immune creaming of human CTLA-4 to human B ligands. The antibodies lock binding of human CTLA-4 to human B ligands. The antibodies are calso useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polycional cantibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treatment of the polyclonal preparations are useful for treatment. The polyvalent or polyclonal preparations are useful for treatment of diseases with inflammatory or allergic treatment of the polyvalent or polyclonal preparations are useful for treatment of the polyclonal preparations are useful for the polyclonal preparations are useful for the polyclon

the antib
                                                                      cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat disease associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and and activity such as cancer, immune, and autoimmune disorders and
                                                                                                                                                                                                                        B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have

                         The present sequence represents a heavy chain of an antibody of the invention. The antibody is directed cytotoxic T-lymphocyte antigen (CTLA) 4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a PRI-PR3 sequence encoded by a human VH3-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. autoimmune diabetes and graft rejection) and proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immunodeficient disorders.

The antibody is directed cytocoxic T-lymphocyte antigen (CTLA)-4. Antibodies of the invention are composed of a heavy chain variable region, comprising a modified contiguous sequence from a RR-FR3 sequence encoded by a human VH3-33 family gene. The modifications are contained in CDR1, CDR2 and/or framework regions. The antibodies may be used to inhibit CTLA-4 and down-regulate the immune system to treat hyperimmunity disorders (e.g. autoimmune disease, diabetes and graft rejection) and proliferative disorders (e.g. cancer). CTLA-4 stimulatory agents may be used to up-regulate immune system to up-regulate immunodeficient disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel antibodies capable of binding cytotoxic T-lymphocyte antigen (CTLA)-4 containing specified heavy and light chain sequences, useful for treating, e.g. immune disorders -

Giardia, Malaria, Leishmania, Staphylococcus aureus, Beudomonas aeruginosa. Human antibodies can be used as detection reagents for performing clinical diagnostic tests and for performing other in vitro detection assays, including for research purposes. (I) can be used in qualitative assays designed to indicate the presence of one or more carget antigens above minimally detectable amounts of antigen in the sample that usually correspond to the sensitivity limitations of the assays for each target antigen. Also, (I) is used to determine the amount of target antigen in a sample in a semi-quantitative or relative sense. Quantification of one or more target antigens in a sample can also be carried out using (I). AAH41612 to AAH41686, and AAB99361 to AAB99399, represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                             antibody (HAMA) (preferably human anti-mouse idiotype antibodies and/or heterophilic antibodies). The method can also be used for detecting any type of target antigen including bacterial, fungal and viral pathogens that cause human diseases e.g., hepatitis (A,B and C), influenza, Herpel Giardia, Malazia, Leishmania, Staphylococcus aureus, Pseudomonas
                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method for detecting an analyte in a human sample containing human antibodies that specifically bind to antibodies from a nonhuman species. The method involves contacting the sample with a human antibody (I) which specifically binds to antibodies from a nonhuman species and detecting the binding between (I) and the analyte to indicate presence of the analyte. The method is used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detecting analyte in human sample containing human antibodies binding to nonhuman-antibodies, involves contacting sample with human antibody which binds to antibodies from nonhuman species and detecting binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 22; Page

                       detecting an analyte in a human sample containing human anti-mouse antibody (HAMA) (preferably human anti-mouse idiotype antibodies and/or cheterophilic antibodies). The method can also be used for detecting any type of target antigen including bacterial, fungal and viral pathogens contained that cause human diseases e.g., hepatitis (A,B and C), influenza, Herpes, contained the human antibodies can be used as detection reagents for caruginosa. Human antibodies can be used as detection reagents for contained the human antibodies can be used as detection reagents for contained the human antibodies can be used as detection reagents for contained the presence of one or more contained that used in the presence of one or more carget antigens above minimally detectable amounts of antigen in the sample that usually correspond to the sensitivity limitations of the cassays for each target antigen to a sample in a semi-quantitative or relative genee. Quantification of one or more target antigens in a sample can also be carried out using (I). ANH41612 to ANH41686, and ANB9361 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for detecting an analyte in a human sample containing human antibodies that specifically bind to antibodies from a nonhuman species. The method involves contacting the sample with a human antibody (I) which specifically binds to antibodies from a nonhuman species and detecting the binding between (I) and the analyte to indicate presence of the analyte. The method is used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting analyte in human sample containing human antibodies binding to nonhuman-antibodies, involves contacting sample with human antibody which binds to antibodies from nonhuman species and detecting binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Buechler J,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S X
                      The present invention describes a method (M1) for producing a human antibody phage display library [1], comprising: (1) providing a nonhuman transgenic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acids encoding human antibody chains (III) from the package and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used for producing a human antibody display be used to screen nucleic acids encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies display library using this method means there is no need to immunise humans with antigens, and the difficulties faced with immortalising B cells are avoided. AAH29988 to AAH30066 and AAB74994 to AAB75056 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches 106; Conservative

The present invention describes a method (M1) for producing a human cantibody phage display library (I), comprising: (1) providing a nonhuman transgenic animal (II) whose genome comprises human immunoglobulin genes; (2) isolating nucleic acids encoding human antibody chains (III) from Clymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used for producing a human antibody display (2) library, e.g., a Fab phage display library. The display method may be cused to screen nucleic acids encoding antibody chains obtained from communised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies (2) display library using this method means there is no need to immunise Cluminise with antigens, and the difficulties faced with immortalising B (2) cells are avoided. AAH29958 to AAH30066 and AAB74994 to AAB75556 (2) or represent sequences used in the exemplification of the present invention.

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and dateivity such as cancer, immune, and autoimmune disorders and confedesses, e.g. systemic lupus erythematous, rheumatoid arthitis, acquired immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibodies against B Lymphocyte Stimulating polypeptides, useful the diagnosis and treatment of cancers and immune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16-JUN-2000; 2000US-212210P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
               detecting an analyte in a human sample containing human anti-mouse antibody (HAMA) (preferably human anti-mouse idiotype antibodies and/or heterophilic antibodies). The method can also be used for detecting any type of target antigen including bacterial, fungal and viral pathogens that cause human diseases e.g., hepatitis (A, B and C), influenza, Herpes, Giardia, Malaria, Leishmania, Staphylococcus aureus, pseudomonas aeruginosa. Human antibodies can be used as detection reagents for performing clinical diagnostic tests and for performing char in vitro detection assays, including for research purposes. (I) can be used in qualitative assays designed to indicate the presence of one or more
                                                                                                                                                                                                                                     The present invention describes a method for detecting an analyte in a human sample containing human antibodies that specifically bind to antibodies from a nonhuman species. The method involves contacting the
                                                                                                                                                                                                                                                                                                                                                        Detecting analyte in human sample containing human antibodies binding to nonhuman-antibodies, involves contacting sample with human antibody which binds to antibodies from nonhuman species and detecting binding
                                                                                                                                                                                 analyte to indicate presence of the analyte. The method is used for
                                                                                                                                                                                                     sample with a human antibody (I) which specifically binds to antibodies from a nonhuman species and detecting the binding between (I) and the

Example 22; Page 98-99; 161pp; English.

The present invention describes a method (M1) for producing a human antibody phage display library (I), comprising: (1) providing a nonhuma transgenic animal (II) whose genome comprises human immunoglobulin gene (2) isolating nucleic acids encoding human antibody chains (III) from lymphatic cells; and (3) forming a library of display packages whose members comprise a nucleic acid encoding (III) which is displayed from the package. The method is used for producing a human antibody display be used to screen nucleic acid encoding antibody chains obtained from immunised nonhuman transgenic animals, and from this a population of antibodies may be prepared. Production of a human monoclonal antibodies may be prepared. Production of a human monoclonal antibodies may be prepared. display library using means there is no obulin genes; nonhuman

                    This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      16-JUN-2000;
